

This is a stem for Kawasaki's rose, seen in Kasahara's book, Origami for the Beginner.

----- valley fold

----- mountain fold

Start from a square piece of paper, folded in thirds. Prefold according to the diagram at the left. A crude representation of the stem is shown below. Flip this over, and fit the square area under the four folded flaps on the reverse side of Kawasaki's rose.

If my memory serves me correctly, using a piece of paper twice the size of that used for the rose will give a good sized stem.

an original (or so I think) fold, diagrammed by A. Anselmo, 6/93.
